Individual Notes:

Simone red dot is confident and self-assured. She shows no stress in new situations, around new people, or in circumstances that would typically be considered stressful. She shows no stress with new sites and sounds, including those that should be considered startling. She has a good memory, focus and problem-solving abilities above average for her age and stage of development. She has very good motivations for interaction, food and toys at equal and balanced levels. She is socially appropriate in her interactions with litter mates, cats, and with other dogs. She is also socially appropriate in her interactions with people. She rarely uses her mouth and has a very good bite inhibition when she does. She is rarely vocal. She is a little clumsy, which is normal for puppies of her size and stage of development. She has mid-level energy, which I expect with maturity will become fairly laid-back. Red has good potential for therapy work. The litter overall are very consistent with very few differences between them. Differences will become more noted as they mature and have different learning experiences. These puppies have no red flags and show no possessiveness. These

puppies are playful, curious, and social. They are content to explore and play on their own red. All of the puppies are personable and engaging. They are gentle and respectful with handling and interaction. These puppies are well-balanced and should adapt well into most any home.

Health notes:

Red dot has an umbilical hernia.
