Individual Notes:

Vera red is confident and self-assured, after a little time to adjust into a new situation. She is curious and investigative of new sights and sounds. She does startle, but recovers quickly and on her own. She has a good memory, focus, and problem-solving abilities average to her age and stage of development. She also has very good motivations for interaction, food, and toys at fairly equal and balanced levels. She is socially appropriate in her interactions with litter mates, cats, and with dogs. She is also socially appropriate in interactions with people. She is very gentle and respectful. She very rarely uses her mouth to initiate or engage in play, but when she does she has excellent bite inhibition. She is rarely vocal. The litter overall have no red flags and show now possessiveness. They are all comfortable and tolerant of handling and restraint. They all have mid-level energy. They are curious, social, playful, and content to explore and play on their own, while still being personable, affectionate, gentle, and respectful. They are well balanced and should adapt well in most any home.

Health notes:

Red has an umbilical hernia.
