### Individual Notes:

The Hallie litter overall is a little immature, but it does not affect the results of the test. They do need a little time to adjust into new situations, but do adjust very well and on their own. They show little to no stress in new situations, around new people, or in circumstances typically considered stressful. They are curious and investigative with new sites and sounds, including those that should be considered startling. These puppies have a good memory, focus, and problem-solving abilities average to their stage of development. They have excellent motivations for interaction and good motivation for food and toys. These puppies overall are socially appropriate in their interactions with one another with cats and with other dogs. White is socially appropriate in her interactions with people. She rarely uses her mouth to initiate or engage in play, if she does she has excellent bite inhibition. White does vocalize some in her effort to get attention but it is easily redirected and or managed. It is also very minimal. She has no red flags and shows no possessiveness. White is comfortable and tolerant of handling and restraint. White has Mid to Moderate energy, and she has good potential for Therapy work.

These puppies are very sweet, curious, playful, and engaging. They are personable and affectionate. They are gentle with handling an interaction.. These puppies are well balanced and should do well in most any home, but would be best in a home that is going to be interactive with them.

### Health Notes:

White's teeth are not all in yet
