

# Meet the Parents

## Faye x Cashew — Parent Overview

### **Faye:**

**Weight:** 38lbs

**Breed:** F1B Goldendoodle

### **Cashew:**

**Weight:** 10lbs

**Breed:** Mini Poodle

**Together,** This is a repeat breeding of Faye's previous litter, and because we have a real, established assessment from that pairing, we are using it as a reliable guide for what to expect from this litter.

The Faye litter consistently produced puppies that were confident and self-assured, showing little to no stress in new environments or when meeting new people—even in situations that are typically considered challenging. These puppies were naturally curious and investigative, responding appropriately to new sights and sounds, including those that might be startling.

They demonstrated strong memory, excellent focus, and problem-solving abilities that were above average for their age and developmental stage. Motivation for interaction and food was excellent, with good toy drive as well. Socially, they interacted appropriately with littermates, cats, other dogs, and people. While they could be a bit enthusiastic or pushy at times in their desire for attention, they were playful, happy, and highly social. They occasionally used their mouths during play but consistently showed excellent bite inhibition.

Vocalization was minimal, there were no behavioral red flags or possessive tendencies, and all puppies were comfortable with handling and restraint. Overall, this pairing produced a very consistent litter with only subtle individual differences, resulting in well-rounded, confident, and socially stable puppies.
