Merlot x Archie — Parent Overview

Merlot:	Archie:
Weight: 35lbs	Weight: 58lbs
Breed: F1B Goldendoodle	Breed: F1B Schnoodle

This is a repeat breeding, allowing us to rely on real temperament data from the previous Merlot × Archie litter. That group was overall confident and self-assured, with only a few puppies needing a brief moment to adjust to new situations. Even when briefly startled by new sights or sounds, they showed strong resilience and recovered quickly on their own, while the majority of the litter approached new stimuli with curiosity and an investigative mindset.

The puppies demonstrated good memory, focus, and age-appropriate problem-solving abilities, along with strong and well-balanced motivation for interaction, food, and toys. Socially, they were appropriate and well-mannered with one another, as well as with cats and other dogs. While a few puppies preferred a bit more independence during handling and could be slightly wiggly, most were calm, comfortable, and tolerant of restraint. Across the board, no red flags or possessive behaviors were observed.

Play behavior was appropriate, with minimal mouth use and very good bite inhibition when it did occur. Vocalization was uncommon, contributing to an overall calm and manageable group dynamic. As a whole, the litter was sweet, eager, and playful, with only slight individual variation but consistently pleasant, easygoing temperaments.

Together, this pairing has proven to produce a well-balanced, adaptable, and engaging group of puppies. With their combination of confidence, social appropriateness, and gentle, playful nature, these puppies are expected to transition smoothly into a wide variety of home environments and make wonderful companions.
