Naomi Litter Temperament Overview:

This is a repeat Naomi breeding, which gives us the benefit of seeing the wonderful temperament this pairing has produced before. Overall, these puppies are **confident, personable, highly engaging, social, playful, curious, and impressively focused**. They are naturally motivated by human interaction and show above-average memory, focus, and problem-solving abilities for their age and stage of development.

There is a strong people orientation throughout the litter. These puppies actively seek interaction and are highly motivated to engage, while also showing very good motivation for food and toys—qualities that can make training especially rewarding. They are socially appropriate with people and other animals and have historically shown very good bite inhibition during puppy play. They can occasionally become a little pushy or vocal when working for attention, but that behavior stems from their enthusiastic desire to interact and is responsive to redirection.

Most of the litter falls at a **mid energy level**, with some showing a little additional range toward mid-to-moderate when excited or actively seeking interaction. A few appreciate a brief moment to process something new, but they adjust appropriately and then reveal very happy, expressive, personable personalities. Handling tolerance and human engagement are consistent strengths across the litter.

Working potential is another exciting quality within this group. The litter should continue to be watched closely for **Service and Therapy potential**, with especially strong individual working potential noted in Orange and Green Dot. Overall, this is a highly people-oriented litter with excellent early foundations for continued working development when paired with appropriate training and socialization.
